

## CRC SCHEME CONSULTATION

- ▶ Collate and compile all your site details and usage data
- ▶ Calculate your footprint & register reports with Environment Agency
- ▶ Advise how to reduce emissions and cost impact of CRC

The CRC Energy Efficiency Scheme (CRC) is a mandatory carbon trading scheme aimed at improving energy efficiency and cutting emissions in large public and private sector organisations. Following several revisions, the CRC is now essentially a complicated green tax. To help reduce the administrative burden of this tax, Apollo Enviro can:

- collate and monitor your energy usage data
- manage & undertake the registration and reporting on your behalf
- maintain a detailed evidence pack with all your site details
- trade in Carbon allowances on your behalf
- explore ways of reducing your energy usage to minimise the cost of the CRC scheme to you

**“The CRC scheme is now a green tax on UK business, are you paying too much?”**

### FREQUENTLY ASKED QUESTIONS:

#### What does it cost?

The cost depends upon the work involved to collate all the energy usage data for your portfolio and the complexity of the company structure amongst other factors so we do not have one flat rate, however we would be happy to provide a no-obligation proposal.

#### Who else have you done this for?

We have numerous clients who have appointed us to help them meet their CRC obligations, including Beaverbrooks the Jewellers.
