

ComEC - COMERCIAL ENERGY CONTROLLER

▶ Reduce and stabilise the voltage on an entire supply to maximise the energy saving potential

- Saves up to 18% of total electricity usage
- Typical payback period around 2 years
- No need to alter your existing electrical infrastructure
- Seamlessly integrates with energy management systems
- Optional communications module allows you to securely login to view unit performance and monitor or adjust settings remotely
- Voltage optimisation cuts energy used and reduces stress on electrical equipment

“**A simple yet effective solution to combat your rising energy usage**”

FREQUENTLY ASKED QUESTIONS:

What does it cost and what is a typical payback period?

Costs vary depending upon the size of the unit required and the size of the installation. Return on your investment usually occurs within 2 years or less.

Does my electricity supply have to be turned off?

Only the relevant circuits and the work can usually be done in approximately 2-5 hours, arranged out-of-hours or at a time convenient to you.

What about maintenance or servicing costs?

There are none, the units are maintenance free. For peace of mind Apollo Enviro back the units with a 2 year limited warranty.
